- Sales and Support of Hardware and Software

WWW.DONTYNEGEARS.COM

Driving Innovation in Gear Development – Dontyne Gears specializes in design, analysis, manufacture, inspection, test and validation of gears, gear systems, and prototype products. The company is supported by the Dontyne Systems software suite which provides a user friendly, intuitively designed product to companies around the world. With over 150 installations in 15 countries (including the UK, Europe, Asia and North America), Dontyne is the clear choice for all your gearing needs.

Since 2013 Dontyne Gears has worked in a range of sectors and facilities for both large corporations and small specialist companies. Dontyne Gears is renowned for taking a comprehensive approach to the design and development of gear systems, often providing clients with fresh, new options and helping them achieve improved product performance and production efficiency.

Convolid®, in certain applications, gives 10 to 50% (or more) power density over Involute.
